

Umberto Boccioni (Italian, 1882-1916). *Unique Forms of Continuity in Space*. 1913. Bronze. Photo Credit: SCALA/Art Resource, NY. Galleria d' Arte Moderna, Milan, Italy.

A founding member of the Futurist school, Boccioni coined the term "plastic dynamism," meaning "the simultaneous action of the motion characteristic of an object (its absolute motion), mixed with the transformation which the object undergoes in relation to its mobile and immobile environment (its relative motion)." Of this sculpture, JC Taylor wrote: "It is muscular without muscles, and massive without weight. The rhythms of its forms triumph over the limitations of the human stride to suggest unending movement into infinite space" (*Futurism*. New York, NY: Museum of Modern Art; 1961:93).
